

Master's Certificate in Technology Entrepreneurship at Eindhoven University of Technology

Brabant Center of
Entrepreneurship

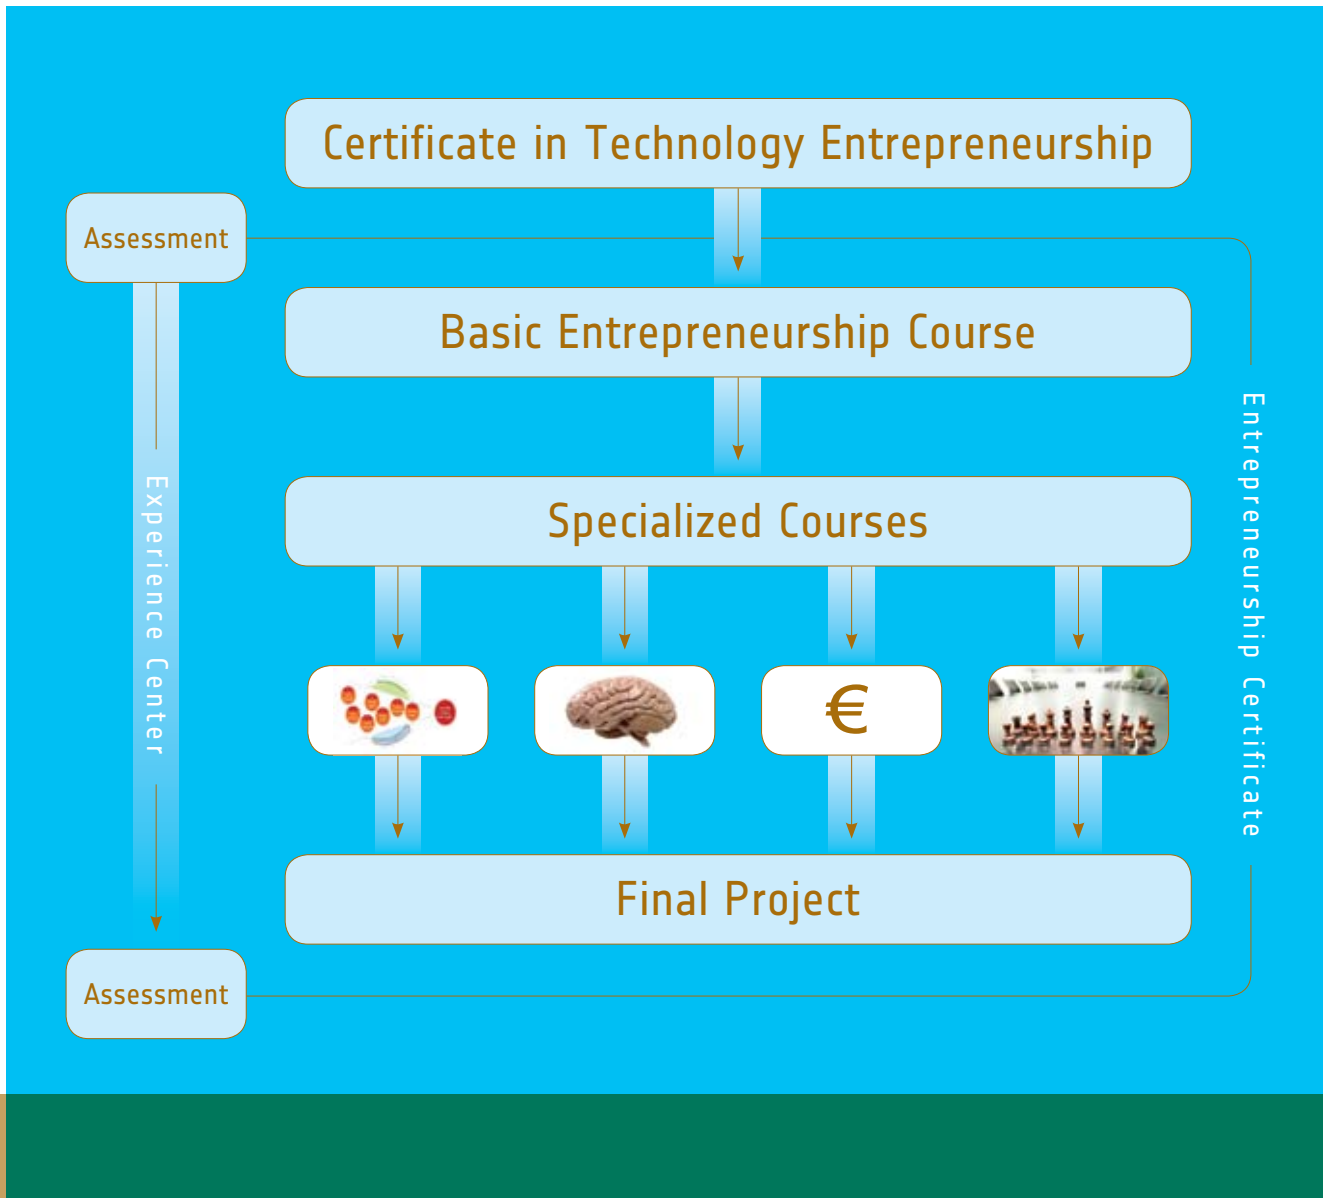

TU/e offers a Certificate in Technology Entrepreneurship (CTE) for master's students interested in starting their own business. The CTE program, open to all master's candidates, helps students improve their entrepreneurial skills. The certificate is awarded jointly by the Department of Industrial Engineering & Innovation Sciences and TU/e Innovation Lab.

The certificate program has three components:

- 9 ECTS (credits) from a Basic Entrepreneurship Course and two electives selected from a list of entrepreneurial courses (see the master's brochure Entrepreneurship Program 2010-2011)
- Skills training sessions, plus master classes recommended on the basis of a personal assessment
- Final Project based on an innovative idea that has been developed at TU/e. This idea will generally need some fleshing out, in terms of both the technology itself and its economic potential. Since no single person generally possesses the knowledge required for this, several projects based on the same idea are sometimes combined (for students from different disciplines). It is also always possible, of course, that a student has his/her own idea they want to develop

The CTE program always starts with students taking their basic course and electives (for a total of 9 ECTS credits). This is also the stage at which they are given an intake interview and must decide on an idea to later develop into a business plan. The intake interview is followed by an assessment to determine what kind of specific skills training sessions are needed. The business plan ideas are taken from research being done at TU/e or ideas presented by the private sector.

**Brabant Center of
Entrepreneurship**

The program is offered twice a year. Informational meetings are given before the start of each semester and announced on the website. Registration forms can be requested via info@bc-e.nl.
